Work Experience

BlueChannel – Software Developer Dec. 2022 – Present

- Build, launch, and maintain high-quality custom web applications using Laravel, Vue.js, and other tools from their respective ecosystems.
- Migrated two data feeds for a real estate foreclosure website and ensured customers continued to receive relevant and up-to-date information. Both migrations required full code rewrites. The first required moving from RETS to a REST API using OData queries. And the second required adjusting to a new data format enforced by the data provider.
- Helped with a full site redesign by converting Figma mockups to code in a BigCommerce store. There were around 15 page mockups and it required me to learn Handlebars templates, BigCommerce theme development, and the Foundation CSS Framework.
- Built a custom application to facilitate a weekly newsletter with curated data for paying clients. This was a rebuild of a legacy system and we updated the tech stack to use Laravel, Inertia & Vue.js.

Document Advisor, Inc – Software Developer Apr. 2019 – Nov. 2022

- Led development and maintenance of a Chrome plugin that helped agents process orders more quickly. It was a smart form filler plugin that helped reduce agent processing time by 50% - 90%.
- Helped develop and maintain ivisa.com, a custom CMS and order processing system built with Laravel and Vue.js. The site is a monolith application with a customer-facing side for researching travel destinations and placing orders, and an employee dashboard for processing orders, managing products, maintaining blog entries, and more.
- Worked on a 12-person developer team and participated in pair programming, reviewing pull requests, triaging bug reports, coding new features, daily standups, and communicating with our product team to develop story ideas.

Mesa Public Schools – Web Programmer Feb. 2017 – Apr. 2019

- Developed and launched an online enrollment system for the district's homeschooled children. An API was built with Laravel and a SPA was built in Vue.js. We worked closely with school officials to coordinate training and design a strong user experience.
- Helped maintain and troubleshoot the main district website, a custom CMS, and a legacy PHP application. Most work involved bug fixes and code refactoring.

Education

CareerFoundry Web Development Certification, Oct. 2015 – Mar. 2016

Arizona State University B.A. Philosophy, Aug. 2004 – May 2010
